Executive summary

Choose the visual direction you want for the Capgemini Exceller preparation website. This review presents three concepts across fifteen screens, covering learning, MCQs, coding, debugging, AI coaching, mock assessments and your personal study library.

The preview gallery lets you compare the same screen in each direction, record a preference for every screen and export your choices. All concepts retain the approach-first AI gate, explicit question context and simulated assessment benchmarks. Your existing website is unchanged by these previews.

At a glance

- A Study Navy uses a persistent sidebar, structured cards and a familiar assessment layout.
- B Calm Teal uses warm surfaces, top navigation and a quieter hierarchy for reading and revision.
- C Midnight Studio uses a dark workspace, compact navigation and prominent coding panels.

Introduction

Your feedback established two priorities: text must be comfortable to read, and assessment questions must include enough information to answer them without guessing missing assumptions. Each concept keeps context visible and separates feedback from an active assessment.

Review the gallery at http://127.0.0.1:3000/design-review/index.html. The Direction and Screen selectors provide forty-five desktop views. Approval selections are saved separately from preparation progress and do not trigger implementation.

Key findings

The strongest differences are navigation, surface treatment and hierarchy. The concepts share the same content so you can compare layouts rather than different features. Each direction includes dashboard, learning, practice, coding and assessment flows.

Context and conditions

The current platform is an independent preparation simulation. No concept introduces an official hiring cutoff, exposes an API key or allows AI code generation before the required reasoning checks. Preview analytics are labelled illustrative, and other progress cards start at zero.

Patterns in the evidence

Study Navy makes navigation continuously visible. Calm Teal gives the content more horizontal room and shifts navigation to the top. Midnight Studio places tools and technical progress in a darker workspace. These are design proposals; no user-retention improvement has been measured.

> **Key takeaway.** Approve the direction that feels easiest to read and use across practice and coding, not only the dashboard.

Implications

A single primary direction will make the site more coherent. You can still combine specific ideas, such as the Calm Teal reading layout with Midnight Studio editor surfaces. Any combination should retain consistent text sizes, status meanings and assessment controls.

Direction	Layout	Best fit
A Study Navy	Sidebar and structured cards	Direct navigation and familiar practice
B Calm Teal	Top navigation and warm surfaces	Reading and revision with a quieter hierarchy
C Midnight Studio	Dark workspace and compact navigation	Coding and technical study sessions

Recommendations

Begin with the screens where you spend the most time. Compare MCQ practice and the problem workspace before deciding on the dashboard. Use the gallery to record your choices; approval remains your decision.

1. **Compare the key screens.** Switch through the three directions on practice, coding, AI coaching and assessment mode. Check context visibility, line lengths, contrast and control placement.
2. **Record your preference.** Click Approve this screen for your chosen direction, repeat for any other screens and export the choices. You may approve one direction for the whole site or specify a mix.
3. **Share the decision.** Send your chosen direction or exported screen preferences in chat. Implementation should begin only after that approval, followed by verification of the existing assessment flows.

Conclusion

The gallery provides enough detail to select a visual direction while keeping the preparation platform available as it is. The report summarizes the alternatives and the approval process.

Your final choice can be simple: A Study Navy, B Calm Teal or C Midnight Studio for the whole website. If you prefer a combination, name the screens and the parts you want to keep.

Appendix

Notes

Screen coverage includes Dashboard, Preparation, MCQ practice, Coding library, Problem workspace, Debugging, AI coding, Mock tests, Assessment mode, Communication, Interview preparation, Analytics, Bookmarks, Notes and Settings.

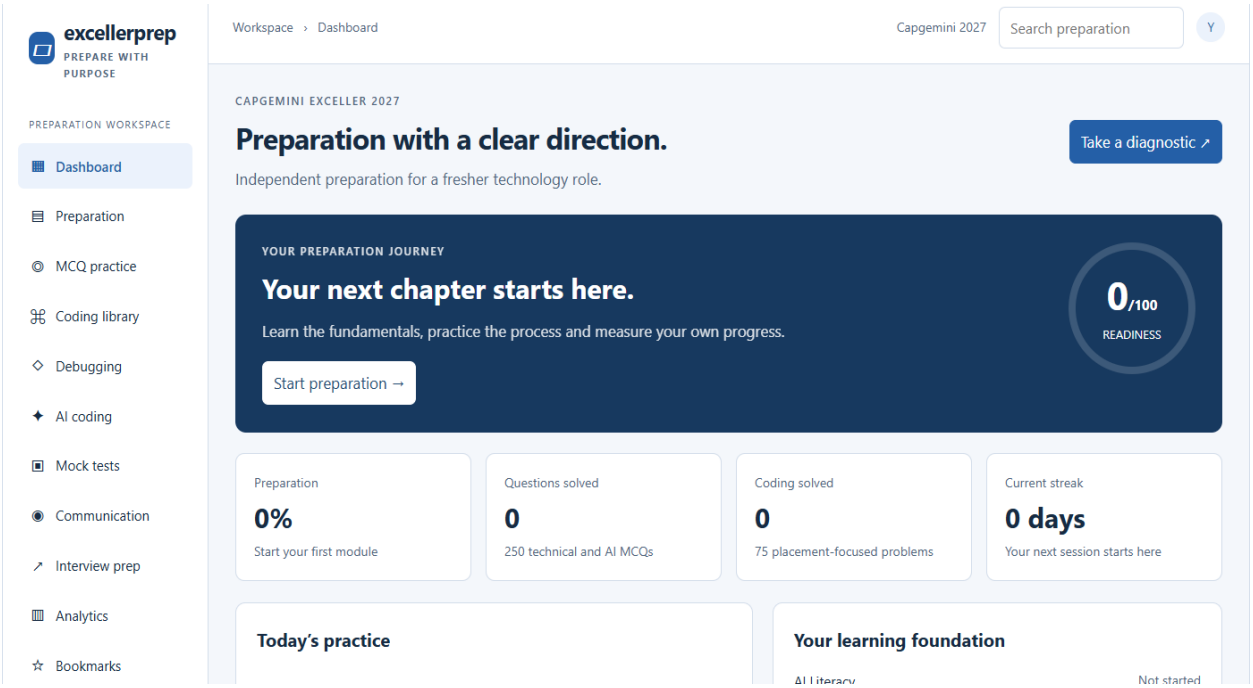

Use the comparison grid to note a preferred direction. The gallery contains the full navigable concepts, including actual seeded question context and sample problem content. Screenshots below show the first dashboard viewport; they are visual proposals, not user performance records.

Screen	Direction	Your notes
Dashboard	A B C	
Learning	A B C	
MCQs	A B C	
Coding library	A B C	
Workspace	A B C	
Debugging	A B C	
AI coding	A B C	
Mock tests	A B C	
Assessment	A B C	
Communication	A B C	
Interview	A B C	
Analytics	A B C	
Bookmarks	A B C	
Notes	A B C	
Settings	A B C	

Screen previews

Study Navy

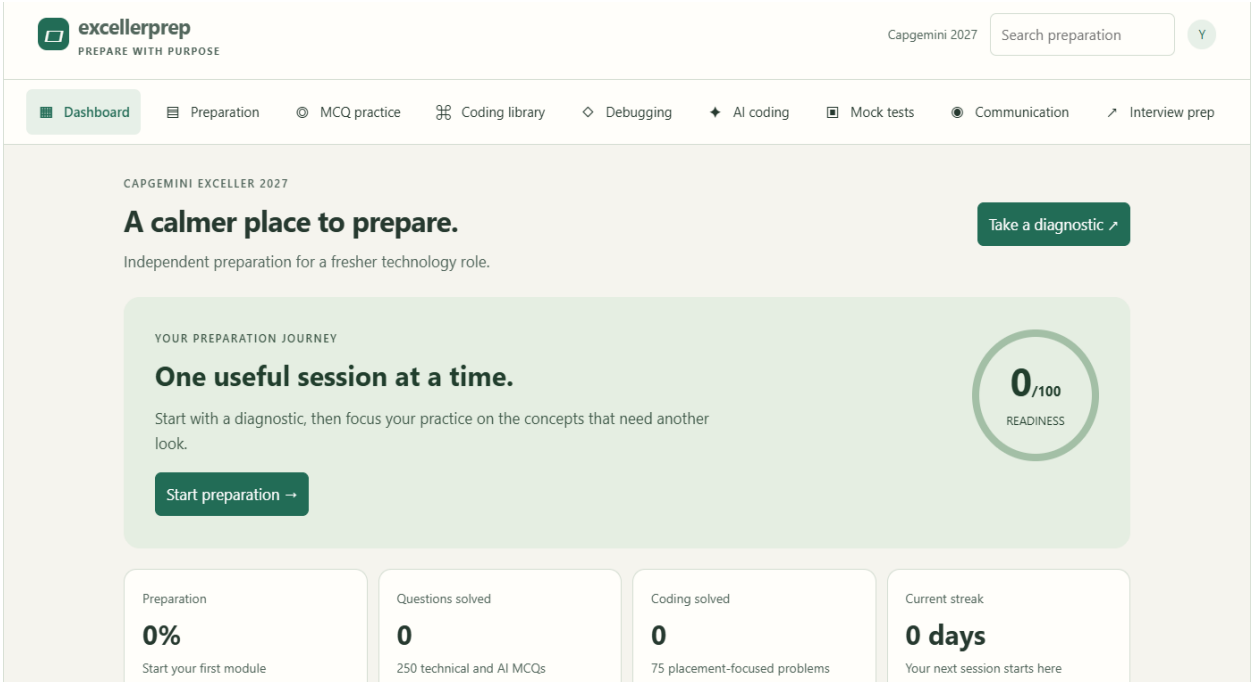

Persistent sidebar, distinct action blue and structured cards. The layout is intended to make the next practice action easy to locate.

Direction A dashboard preview. Review all fifteen screens in the gallery before approving this direction.

Calm Teal

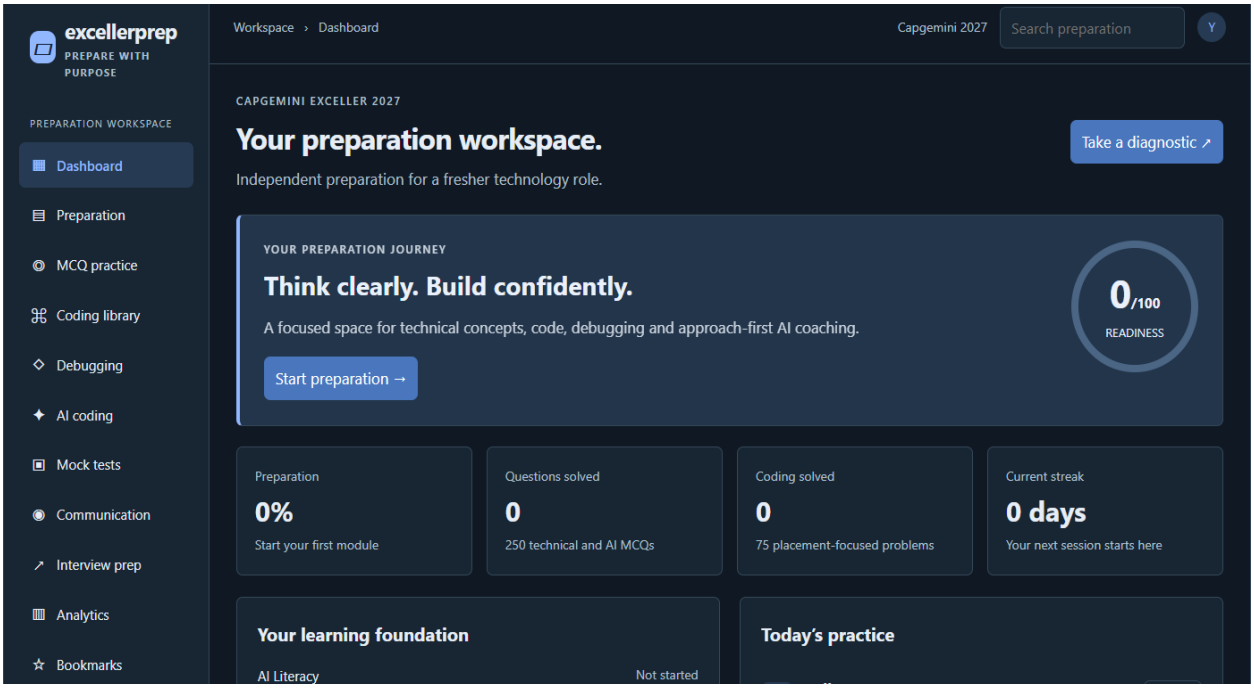

Warm neutral surfaces and a softer green accent. Top navigation gives the learning content more room, with a restrained reading-first hierarchy.

Direction B dashboard preview. Review all fifteen screens in the gallery before approving this direction.

Midnight Studio

Dark slate surfaces and lighter blue accents. The technical workspace gives the editor and progress information clear visual separation.

Direction C dashboard preview. Review all fifteen screens in the gallery before approving this direction.

- Sources include the current Exceller Prep feature structure and seeded question bank, the user's design and readability feedback, and the three locally authored preview directions. The selected Design Report template supplies this document's layout.

> **Approval note.** No direction has been approved on your behalf. Preview selections remain separate from the live app; share your final decision in chat before implementation.
